

L Flip Storyboard

Learner-driver logbook app with smart flip-over L-plates · Part 3: Tracking progress to the driving test

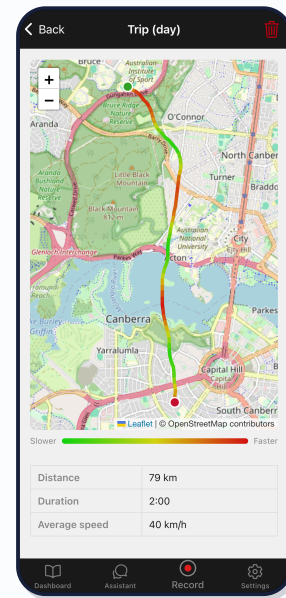

13 Dashboard: hours build up

Opens a trip from the record

Every saved drive updates the **day, night and total hour charts** against the state's targets, and the table below is a proper **record of driving hours**: date, weather, supervisor and licence number, exactly what the logbook must show.

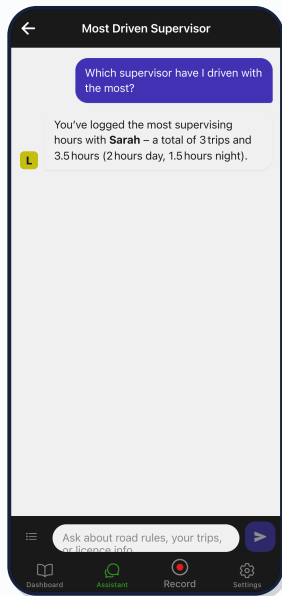

14 Trip detail: the drive, mapped

Each entry holds what a paper logbook never could: the **GPS route coloured by speed** (green is slower, red is faster), distance, duration and average speed. Solid evidence if hours are ever questioned.

Has a question, opens the Assistant tab

15 Built-in driving assistant

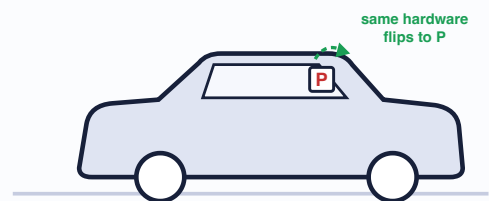

Months of practice later, hours complete...

The assistant answers from the learner's **own logbook**: here it reads the trip data and works out who supervised the most hours. Privacy is opt-in, so the Settings toggles decide exactly which data it may access.

16 The goal: from L to P

Hours complete: ready to book the test
100 h total · 10 h night · logbook export ready

When the learner passes, nothing gets thrown away: the double-sided plates in the windows simply **flip to the red P**, and the app keeps working for the provisional years. The product outlives the L-plate stage it was bought for.
